

# PSB® Headed Anchors

Effective anchorage and easy installation

- Easy and time-saving installation also in highly congested areas
- Wide range of use in any concrete element
- Diameter range of headed rebars from 10 mm to 32 mm
- European Technical assessment ETA 21/0373
- Anchorage capacity of head is adequate to tensile resistance of rebar.

PSB® Headed Anchor is used for reliable anchorage of rebars into concrete. The head is forged at one or both ends of the rebar. The head allows transferring the full tensile strength of the rebar once casted in concrete. PSB® Headed Anchors allow to optimize the detailing of the reinforcement and reduce reinforcement congestion in joint areas.
